Update on Public Notification

Update regarding the recent public notification of elevated HAA5 compounds

Recent changes at the City of West Columbia's Lake Murray Surface Water Treatment Facility have resulted in a significant reduction in disinfection byproducts leaving the plant. The City has notified JMWSC that the issue has been resolved. Additional samples collected by the City as well as our own independent sampling have confirmed the treatment technique is working. We remain encouraged that SCDHEC compliance samples will confirm our and the City's results. Another public notice will be sent when we receive the compliance samples from SCDHEC.
